|  | 5 a | 48 hours | 48 hours | 10 days | 10 days | 79 days | 67 days |
| BGA package $>17 \mathrm{~mm} \times 17 \mathrm{~mm}$ or any stacked die package (See Note 2) | 2-6 | 96 hours | As above per package thickness and moisture level | Not applicable | As above per package thickness and moisture level | Not applicable | As above per package thickness and moisture level |

Note 1: Table 4-1 is based on worst-case molded lead frame SMD packages. Users may reduce the actual bake time if technically justified (e.g., absorption/ desorption data, etc.). In most cases it is applicable to other nonhermetic surface mount SMD packages.
Note 2: For BGA packages $>17 \mathrm{~mm} \times 17 \mathrm{~mm}$, that do not have internal planes that block the moisture diffusion path in the substrate, may use bake times based on the thickness/moisture level portion of the table.
Note 3: If baking of packages $>4.5 \mathrm{~mm}$ thick is required see appendix B.
